

While you are waiting for the other groups to finish, discuss and answer the following questions as a group.

How much variation was there between when the different volcanoes erupted?

---

How easy/hard was it to make a prediction about when the second volcano would erupt?

---

What other factors do you think might influence how many people are injured/killed in an eruption?

---

On the map below, mark the main places where active volcanoes are found. Why do they follow a pattern?

---
